Til today, education is the power to move forward an economy. The importance of education has grown over the years, that have made possible talents to grow better with the strengths they built continuously with more qualifications and trainings in order to facilitate gaining knowledge. Any data and information are now at the finger tips and many countries are improving their economy. However, there are countries which are still behind or they are still in the process of bringing up the education level to greater heights.

This qualitative study brings evidence for education and job profession, deliberated in an attempt to strengthen the fraternity concerned. Various issues were coordinated and input from stakeholders were addressed. Among the factors observed were accreditation, quality control, standards, universities, professional and industry requirements as well as governance. It is hoped that the findings of this study provides an outlook what to expect in the course of providing more quality education for sustainability, that can be used as a benchmark for educators, practitioners and policy makers when coping with changes in the economy.
